

## Assignment Nr. 10

(Deadline 26.01.2020)

### Task 5

The 10 samplealignments got produced with the following commandline:

```
diamond blastx -q sample02.fasta -d viral -o sampleXXalignment.fasta -k0 -f6 stitle
```

So because we got 10 fastq datafiles, we used the blastx mode for the alignment against the produced database called viral.dmnd. So to get all hits (at most 1) we use the -k0 comand and the -f6 stitle command to only get the names of the matches and not the sequences.

Escherichia phage Lambda_ev207	0	0.11	0	0.11
Escherichia phage Lambda_ev017	0	0.11	0	0.11
Escherichia virus Lambda_4A7	0	0.11	0	0.11
Daeseongdong virus 1	0.11	0	0	0
San Bernardo virus	0	0	0.11	0
Cordoba virus	0	0	0.11	0
putative RNA-dependent RNA polymerase				
se ABC transporter, inner membrane permease protein SitD				
Manganese ABC transporter, inner membrane permease protein 1				
hypothetical protein SitC				

Organism

1	Noumeavirus
2	no hit
3	no hit
4	Microbacterium phage nephthea
5	Phoydomonas phage SL2
6	Escheria phage Lambda <sub>e</sub> v207, <i>EscheriaphageLambda<sub>e</sub>v017</i> , <i>EscheriavirusLambda<sub>4</sub>A</i>
7	no hit
8	no hit
9	no hit
10	Nouveavirus
